

## **REMARKS/ARGUMENTS**

Applicant responds herein to the Office Action dated June 3, 2005.

Claims 1-33 were rejected under 35 U.S.C. §103(a) as being unpatentable over Nielsen et al., U.S. Publication No. 2001/0030663 A1, and further in view of Oosterholt et al., U.S. Publication No. 2001/0008399 A1. Reconsideration of the rejection is respectfully requested.

Independent claims 1, 12 and 23 have been amended, in part, to provide that “a first display mark ... provides a reference information linked to past-referred to data stored in said communication terminal; ... a third display mark ... provides an access-related information allowing said communication terminal to access a past-referred to file stored in a computer device connected to said communication network, ... and ... said reference information having been automatically created in a normal operation mode of said communication terminal when said past-referred to data was referred to, and said past-referred to file having been referred to in a communication mode of said communication terminal.” The amendments to independent claims 1, 12, and 23 are supported by, for example, page 12, line 24 to page 13, line 19 and page 20, line 5 to page 21, line 1.

In contrast, neither Nielsen et al. nor Oosterholt et al. disclose, teach, or suggest such a feature.

Nielsen et al. does disclose an icon for “Names” 60 shown at the bottom of a display of a terminal, the icon “Names” 60 allowing a user to access a built-in telephone book, (paragraph [0039], lines 18-21). However there is no disclosure, teaching, or suggestion that reference information about names previously referred to is automatically created when those names are referred to.

With regard to Oosterholt et al., that reference discloses a personal computer 101, which has a Web browser 201, including a history means 202, which maintains a list of references to Web pages which have been presented earlier, (paragraph [0018], lines 1-5; paragraph [0019], lines 1-4). Oosterholt et al. thus refers to the access of Web pages which may be equivalent to a past-referred to file stored in a computer device connected to a communication network, the past-referred to file having been referred to in a communication mode of the communication terminal, as claimed in independent claims 1, 12 and 23. In contrast, independent claims 1, 12, and 23

provide for past-referred to data stored in the communication terminal, reference information linked to the past-referred to data being automatically created in a normal operation mode of the communication terminal when the past-referred to data was referred to. In the context of the instant claims, "normal operation mode" encompasses operation while the computer is not communicating over an external network. Thus, the reference whose teaching is for web applications is deficient to teach automatic creation of reference information in a "normal operation."

Since claims 2-11, 13-22, and 24-33 are directly dependent upon one of independent claims 1, 12, and 23, they are allowable over Nielsen et al. in view of Oosterholt et al. for the same reasons recited above with respect to the allowability of independent claims 1, 12 and 23 over Nielsen et al. in view of Oosterholt et al.

In view of the foregoing remarks, the allowance of claims 1-33 is respectfully requested.

Accordingly, the Examiner is respectfully requested to reconsider the application, allow the claims as amended and pass this case to issue.

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as First Class Mail in an envelope addressed to: Mail Stop Amendment, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on August 8, 2005:
